

BeX® WMS with mobile warehouse management and barcode scanning

With BeX® WMS mobile warehouse management you can, as a customer and BeX® user manage your warehouse on-the-go with an iPad and barcode scanner. This means that you will avoid the traditional method of transferring to a handheld computer or write it down manually on paper, which in turn is simpler, more easily managed and more environmentally friendly. With BeX® WMS mobile warehouse management you can create and manage stock taking, manage purchase order receipt, and work with picking and packing lists directly on an iPad with a connection to a barcode scanner. With the use of a handy little scanner you can easily scan barcodes on the product or a label from a shelf which will directly appear on your iPad, or computer or even your mobile phone. Through a few simple steps the scanner is connected via Bluetooth. When the scanner is connected, you can immediately start working. BeX® WMS mobile warehouse management is an integrated part of the ERP system BeX® Online which is a true cloud-based SaaS-solution. This means that you don't need to install any software and that everything is managed through your internet browser that you log onto and can start working. All processing towards warehouses and order management is done in real time. All other information in the system, such as customers, articles, inventory etc. is of course also available directly with an iPad.

BeX® WMS can be complemented with the use of a robot warehouse management system for further ease of inventory management. There are existing integrations to, for example, Autostore and Weland. BeX® API also provides the possibility of all kinds of external solutions and products for picking, logistics and message systems etc.

Portal for mobile inventory management in Bex WMS

- Stocktaking with barcode scanner provides direct control of valid barcodes and the ability to manually edit.
- Purchase order receipt with a barcode scanner. Control and completion of purchase order as well as scanning of shelf space is done simultaneously.
- Simple and quick management of picking and packing through management of picking batches with item-pictures directly in the iPad. Validation with barcodes can be done at both picking and packing.
- Easy connection via Bluetooth directly from scanner to your mobile device.
- A paper free more environmentally friendly alternative for warehouse management.
- Scanner with iPad is cheaper, simpler and safer than older handheld computers.
- All processes are done in real time and updates to connected sales channels, both physical stores and e-trading platforms.
- The mobile warehouse management is an integrated part of the ERP system BeX® Online. All processes happen in real time.
