

BeX® Online

BeX® Online is a modern and completely web based ERP system for retail businesses that is offered as a service in “the cloud”. Thanks to modern technology and smart solutions BeX® becomes easier, more effective and cheaper compared to traditional ERP systems. BeX® Online is shaped for the needs of today with both sales in physical and digital channels. Information and management is handled in real time between trading platforms in order to achieve so called Omni channel or Unified Commerce. BeX® Online can handle an infinite number of businesses, warehouses, currencies and price lists and more. Joint directories for articles, customers, suppliers and vouchers facilitates maintenance and coordination.

BeX® Online is offered as a service for a fixed user based monthly fee where everything except system training is included.

- No surprises
- No investment
- Always updated
- Always available

Work anywhere – Sell everywhere:

- Article directory with groupings for statistics and searches, customs and order information, text blocks with HTML-editing, variant management (color, size, length) packages, tags, pricelists and more.
- Order function with status, order types, collection management, part delivery, matrix management of variants, package management, delivery and invoicing.
- WMS and management of in and outbound deliveries, inventory adjustments, warehouse adjustment and stocktaking.
- Direct delivery externally and internally in the organization.
- Return management with return cause, exchange order and repayment.
- Purchase module with purchase order status, order approval, purchase delivery control, purchase planning, purchase suggestions and store restocking.
- Loyalty club with bonus system.
- Voucher ledger for the management of all vouchers in all sales channels and companies. Manage bonus, gift cards, credit notes and deposits. Posting and settlements between stores and companies is done automatically.
- Accounting module with appropriate functions for posting, VAT, account ledgers, invoice management and payments.
- API for connecting external systems that can retrieve and send data concerning e.g. article, prices, inventory, customers, orders, deliveries, returns, purchases, vouchers and more.
- Reports and documentation. All data can be exported to Excel.
